

```
from datapackage_pipelines.wrapper import process
import time
```

```
def process_row(row, *_):
    row['timestamp'] = time.time()
    return row
```

```
process(process_row=process_row)
```

Customer Processing

What about data manipulation that cannot be done with standard processors?

- We add it in code -
but just the specific bit.

Come and hack with the
Public Knowledge Workshop

we meet at:
Google Campus TLV
Every Monday 7pm

Custom Processing

What about data manipulation that cannot be done with standard processors?

- We add it in code - but just the specific bit.

```
from datapackage_pipelines.wrapper import process
import time
```

```
def process_row(row, *_):
    row['timestamp'] = time.time()
    return row
```

```
process(process_row=process_row)
```
